

**A STANDALONE FRIDGE  
WITH SELF-FRONTING  
SHELVES**

## Scaneton Island

Scaneton Island is an island-shaped dairy fridge equipped with Scanloader self-fronting shelves. Create powerful signals to buy from two directions by adding on Scanloader Front for exposure on the gable. Easy access via a glass door entrance fitted with a ramp. The shelves are restocked from the inside of the fridge – perfect for both staff and customers.

With LED-lit shelves from top to bottom, it is a profitable centrepiece in your store. Total exposure that attracts customers.

---

## **SMARTER COOLING**

New patented cooling technology enables the cool air to enter from above and spread naturally. This guarantees a more stable flow whilst ensuring cooling of the front row products first. No more bulky evaporator or hard-to-clean cooling grids at the bottom of the fridge – fit more products on the same area and decrease energy costs!

## **MORE EFFICIENT SELF-FRONTING**

The most modern self-fronting on the market decreases overhead costs and increases sales. The Scanloader self-fronting shelf system provides easier product handling, more efficient FIFO and better product hygiene. No plastic details, only durable materials that can support heavy loads. Quality that pays off – all day, every day.

*Forget everything you've learned so far about store cooling solutions. We offer a flexible and energy-saving design consisting of 10 cm thick Isopanel built in modules of 1.2 meters. The support structure is so durable that it can even support a complete plug-in unit or evaporator.*
