

Colonial DRY

The Colonial DRY works the same way in the colonial aisle as the Scanloader does for the dairy products. The difference is the mounting. For stability, the Colonial DRY is cross mounted, seeing as there normally aren't any existing points to attach the sections to. This means the shelf system can be mounted without having to drill into the flooring.

Colonial DRY is the obvious choice if you want to enjoy the benefits of self-fronting shelves with your colonial products.

The shelves are made with durable materials, like aluminium and steel, which make them easy to handle while still being extremely durable. The staff can move the shelves around and adjust them after your needs. Forget plastic details and hiding places for dirt. Hygiene and easier cleaning are integrated into the construction. With Colonial DRY you maximise exposure while decreasing overhead costs every day.
